EXPERIENCE

R2D2 Consulting <i>AI Integration Engineer</i> - Built and deployed end-to-end AI integration workflows using Python to automate data ingestion, transformation, validation, and downstream processing, doubling processing speed, reducing manual intervention by 50%, enabling more reliable and scalable business operations - Diagnosed and resolved performance bottlenecks across REST APIs, data pipelines and asynchronous workflows, reducing processing latency by 30% and improving production reliability - Built automated testing and monitoring frameworks to diagnose failure modes and prevent production errors, improving system reliability and reducing operational disruptions by half - Partnered with stakeholders to map requirements and design AI-enabled systems that turned unstructured business data into structured, production-ready datasets for CRM, analytics and operations, cutting analytical errors by 40% - Standardized client data environments and built reusable integration components, improving email delivery reliability to 99% and enabling faster, more reliable production releases	New York, NY (Remote) <i>Nov 2024 - Present</i>
New York Institute of Technology <i>Technology & Automation Analyst</i> - Led the design and development of an inventory automation system with the Director and ITS team, replacing a paper-based process and delivering 35% annual cost savings - Crafted 70+ modern, responsive Canvas LMS interfaces using HTML5 and CSS3 and redesigned the NYIT Zoom portal, improving page-load performance by 60%, student engagement by 45% and user adoption by 2x - Automated the Thank a Professor certificate workflow using Excel and Power Automate, eliminating repetitive manual processing, streamlining operations and saving 100+ hours annually - Designed and supported technology workflows serving 7,000+ students, identifying data inconsistencies, workflow failures and process bottlenecks across academic operations	New York, NY <i>Mar 2023 - Oct 2024</i>
Estatic Infotech Pvt. Ltd. <i>Data Automation Engineer</i> - Implemented a communication widget integrating Twilio Voice and Messaging APIs, connecting user actions to real-time calling and messaging workflows within client applications enhancing support coverage by 50% - Built Python data pipelines with validation logic that automated cleansing, reconciliation and transformation, improving reporting reliability - Automated SQL-to-Power BI reporting workflows, reducing recurring manual reporting effort by 30% - Resolved data and reporting issues across multiple source systems, transformations and dashboards, restoring reliable business reporting	Ahmedabad, GJ <i>Jul 2020 - Jul 2022</i>

SKILLS

Programming & Data Systems: React.js, Next.js, Bootstrap, Node.js, Express.js, Python, SQL, PostgreSQL, MySQL, SQL Server, MongoDB
APIs & Integrations: REST APIs, JSON, API Integration, Data Integration, Workflow Automation
AI & LLM Systems: Generative AI, AI Agents, LLM Applications, LLM API Integration, Prompt Engineering, AI-powered Automation, NLP
Data Engineering: Data Pipelines, Data Transformation, Data Validation, Data Profiling, Anomaly Detection, Deduplication, Data Standardization
Automation & Platforms: Power Automate, Microsoft Dataverse, Microsoft Lists, Power Query, Power BI, Tableau, Excel

EDUCATION

New York Institute of Technology (2022 – 2024)	<i>Master of Science in Computer Science (With Distinction)</i>
Gujarat University (2020 – 2022)	<i>Master of Science - IT & Computer Applications (With Distinction)</i>
Gujarat University (2017 – 2020)	<i>Bachelor of Science - IT & Computer Applications (With Distinction)</i>

PROJECTS

RoamEase Travel Portal React.js, Node.js, Express, PostgreSQL, REST APIs - Built a full-stack travel recommendation platform that integrated REST APIs, PostgreSQL and analytics workflows to centralize trip planning and personalized travel insights - Developed recommendation and user-interaction workflows to help travelers discover relevant destinations and trip options, increasing user engagement by 30% - Designed analytics dashboards to surface user behavior and travel trends, enabling data-driven improvements to recommendations and platform experience
Placement Management System React.js, Next.js, Express.js, Node.js, PostgreSQL, REST APIs - Worked directly with the Gujarat University Placement Cell to gather requirements and design a full-stack platform covering student, company and admin workflows - Built a three-sided system that automated student-job matching, job applications and placement tracking, increasing hiring speed by 75% - Replaced fragmented manual processes with centralized APIs, workflows and reporting that cut manual processing by 30% and gave the team faster visibility into hiring activity
