EXPERIENCE

R2D2 Consulting <i>Senior Data & AI Analyst</i>	New York, NY (Remote) <i>Nov 2024 - Present</i>
- Architected AI-enabled data solutions that turned unstructured enterprise data into reliable, ML-ready datasets for analytics, CRM and operations, reducing analytical errors by 40%. - Built data-quality frameworks across large enterprise datasets using automated profiling, anomaly detection, standardization, deduplication and business-rule validation, improving data reliability and decision-making speed by 3×. - Led automation of complex data workflows by combining SQL, Python, APIs and AI techniques, removing repetitive manual processes and creating scalable, auditable data operations. - Analyzed millions of enterprise records, identifying data-quality gaps and building reusable transformation frameworks that standardized client environments and improved email delivery to 99%. - Collaborated with data, engineering, operations and client teams to define requirements, set data-quality standards, troubleshoot pipeline issues and deploy production-ready solutions.	
New York Institute of Technology <i>Operations & Technology Analyst</i>	New York, NY <i>Mar 2023 - Oct 2024</i>
- Managed operational datasets supporting 7,000+ students, using Excel to validate records, identify inconsistencies and improve reporting integrity. - Analyzed inventory data in Excel to spot duplicate orders and discrepancies, then automated the order-placement workflow with Microsoft Lists and Power Automate, cutting administrative effort and delivering 35% annual inventory cost savings. - Redesigned the NYIT Zoom portal and created interactive dashboards, documentation and training that improved operational visibility, standardization and user adoption by 2× across academic teams. - Automated the “Thank a Professor” certificate generation process using Power Automate, streamlining student feedback processing and saving roughly 100+ hours of manual work each year.	
Estatic Infotech Pvt. Ltd. <i>Data Analyst</i>	Ahmedabad, GJ <i>Jul 2020 - Jul 2022</i>
- Analyzed and reconciled business datasets in Excel, performing data cleansing, validation and quality checks to identify anomalies, trends and performance gaps, improving reporting accuracy by 40%. - Standardized data preparation, validation and recurring reporting workflows in Tableau, reducing manual analysis and reporting effort by 30% while improving consistency and turnaround time. - Used SQL to build recurring analyses and reports, establish business KPIs and surface performance gaps that drove targeted process improvements and better operational efficiency. - Built Power BI dashboards to track key KPIs, cutting manual reporting time by 40% and giving management clearer visibility into performance trends.	

SKILLS

Programming & Data Analysis: SQL (PostgreSQL, SQL Server, MySQL), Python (Pandas, NumPy, Scikit-learn), Excel, Power Query
AI, Automation & APIs: Generative AI, Prompt Engineering, NLP, AI-powered automation, Power Automate, REST APIs
Business Intelligence & Analytics: Power BI, Tableau, Statistical Analysis, Forecasting, A/B Testing, RFM Analysis, Cohort Analysis
Data Quality, Governance & Platforms: Data profiling, Anomaly detection, Deduplication, Data standardization, Business-rule validation, MongoDB, Microsoft Dataverse, Microsoft Lists

EDUCATION

New York Institute of Technology (2022 – 2024)	<i>Master of Science in Computer Science (With Distinction)</i>
Gujarat University (2020 – 2022)	<i>Master of Science - IT & Computer Applications (With Distinction)</i>
Gujarat University (2017 – 2020)	<i>Bachelor of Science - IT & Computer Applications (With Distinction)</i>

PROJECTS

Marketplace Performance & Customer Analytics SQL, Python, Power BI, Excel
- Analyzed 100K+ transaction and customer records using SQL and Python to uncover revenue, conversion and product performance trends. - Built an RFM-based customer segmentation model to identify high-value, at-risk and repeat customer groups. - Designed an interactive Power BI dashboard tracking revenue, conversion and product performance, cutting recurring reporting effort by 40%. - Conducted cohort and trend analysis to surface customer behavior patterns and recommended actions to improve retention and revenue.
Business Forecasting & Experimentation Analytics Python, SQL, Excel, Power BI
- Built a Python time-series forecasting model to predict weekly sales and demand, improving forecast accuracy by 20% for inventory planning. - Implemented A/B tests using SQL and Python to measure impact on conversion and customer engagement with statistical significance testing. - Created SQL-based analytical datasets and KPI validation checks that reduced reporting inconsistencies by 40% and standardized experiment measurement across business segments.
